

Volvo Rally Exhaust System

Nine extra horsepower! And a sound that even your neighbours will like.

Suppose you've fitted a Volvo B 20 GT Kit. Add the Volvo Rally Exhaust System and you've got nine extra horsepower! That will take a Volvo 142 from 0 to 100 km/h in only 10.2 seconds!

Because the Rally Exhaust System gives the engine better "breathing" capacity. Which in turn improves the output from 119 hp DIN to 128 hp DIN at 6,000 r/m, provided you've got the Volvo B 20 GT Kit.

The Rally Exhaust System alone means a gain of as much as five extra hp. The other and very important task of the Volvo Rally Exhaust System is to give your car that mellow sound. On a level that even your neighbours will like and, of course, the authorities too.

Equipment for the Car Enthusiast.
