DEX KVALITETSSTEREO FRÅN MITSUBISHI

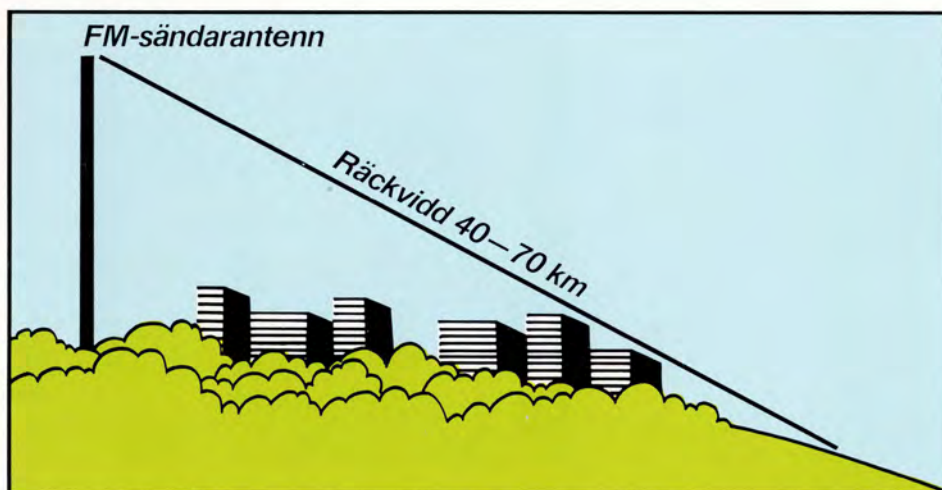

SÄNDAREN

Det enda en radio/stereo-tillverkare inte kan påverka är sändarens kvalitet. Men din Volvo ljudanläggning är utrustad med en rad finesser för att kompensera variationer i sändningens styrka och kvalitet.

Landskapets topografi är också avgörande för mottagningen. Bilden visar att du ibland kan få in flera signaler från samma sändare. En primärsignal direkt från sändaren och en eko-signal från tex ett berg. Detta kan ge upphov till brus och störningar.

Din Volvo radio kompenserar delvis detta genom automatisk FM-avstörning och återgång till full stereoeffekt när du passerat det kritiska vägpartiet.

FM-sändare ger det bästa ljudet. Räckvidden är ca 40 – 70 km. Vid stereosändning något kortare (ca 20%).

Sändartätheten varierar från land till land – men den är i allmänhet så väl utbyggd att du får ut god effekt ur din mottagare eftersom sändaren överlappar varandra.

På längre resor måste man alltså byta station då och då.

VOLVO
